

Critical Thinking – Essential Soft Skills for Corporate Success

Skills & expertise to help you increase your knowledge in the field of various essential soft skills

About the Workshop

Critical thinking is the analysis of facts to form a judgment. The subject is complex, and several different definitions exist, which generally include the rational, skeptical, unbiased analysis, or evaluation of factual evidence.

Critical thinking varies according to the motivation underlying it. When grounded in selfish motives, it is often manifested in the skillful manipulation of ideas in service of one's own, or one's groups', vested interest. As such it is typically intellectually flawed, however pragmatically successful it might be. When grounded in fairmindedness and intellectual integrity, it is typically of a higher order intellectually, though subject to the charge of "idealism" by those habituated to its selfish use.

Critical thinking of any kind is never universal in any individual; everyone is subject to episodes of undisciplined or irrational thought. Its quality is therefore typically a matter of degree and dependent on, among other things, the quality and depth of experience in a given domain of thinking or with respect to a particular class of questions. No one is a critical thinker through-and-through, but only to such-and-such a degree, with such-and-such insights and blind spots, subject to such-and-such tendencies towards self-delusion. For this reason, the development of critical thinking skills and dispositions is a life-long endeavor.

This one-day workshop shall discuss various techniques, methodologies including general discussions based on activities and workshop assessments.

A workshop designed to develop leaders for tomorrow:

Today, as companies increasingly need to become more dynamic, interconnected and flexible, thus soft skills are becoming critical. According to various global surveys and reports, senior executives are now considering the acquisition of soft skills as an essential components important to fostering employee retention, improving leadership capabilities and qualities, and building a meaningful culture under a stressful challenging environment. This workshop is designed to help resources today to improve their conflict management and resolution skills with a vision to develop dynamic leaders for tomorrow.

Course Highlights

Critical thinking can be seen as having two components: 1) a set of information and belief generating and processing skills, and 2) the habit, based on intellectual commitment, of using those skills to guide behavior. It is thus to be contrasted with: 1) the mere acquisition and retention of information alone, because it involves a particular way in which information is sought and treated; 2) the mere possession of a set of skills, because it involves the continual use of them; and 3) the mere use of those skills ("as an exercise") without acceptance of their results.

About the Workshop Facilitator

Workshops at TLC will be imparted by an experienced passionate trainer with 25+ years of career experience conducting education and training services for local and international customers.
